How do I authenticate to EBSCO collections outside of the library network?

Last updated: Tue, 22 Oct 2019 15:57:01 GMT

Applies to

• WorldShare Collection Manager
• Access to EBSCO databases

Answer

There are two ways to handle offsite authentication:

1. **Recognition** through EBSCO - When a patron logs in, they can be recognized as "safe" through the EBSCO systems.
2. **EZproxy** - If you have authentication via EZproxy that can be set up to recognize users of the system.

Additional information

For details of onsite authentication.
