When I am using an OpenURL link into ILLiad, what Web page is presented to the patron?

Symptom
• You want to know which Web page is showing to the patron when using OpenURL

Applies to
• ILLiad

Resolution
You are seeing the Logon2.html even though the URL shows ILLiad.dll. So if someone is getting a page missing error message when going through OpenURL, then it has to do with the logon2.html.

Page ID
32246
