Learn how to use OLIB Web configuration, to allow end users in Folio to issue, return and renew items.

Issues and returns in Folio

Folio can be configured to allow end users to issue items to themselves and, separately, return items that they currently have on loan. By default these options are not configured.

If they are configured, a logged in user can do this in the following ways:

- the User Services menu above, barcode entry can also be done using a scanner if you have one attached to the machine running Folio
- the catalogue details: Copy Availability tab (Issues)
- the user account details: Loans tab (returns)

Issues

Users can issue items to themselves in these ways:

User Services: Issue item

When the user selects Issue Item from the User Services menu, Folio displays an Issue screen:

The end user types in the barcode and clicks the Issue button. A Folio message confirms the transaction was successful:
Item (barcode) was issued successfully. Please return on or before [nn month year].

If unsuccessful the message explains why.

**Title availability tab**

When displaying the record details of an item in Folio, the Availability tab can be configured to show the Issue icon to a user who is logged in:

<table>
<thead>
<tr>
<th>Copy Availability</th>
</tr>
</thead>
<tbody>
<tr>
<td>Barcode</td>
</tr>
<tr>
<td>9</td>
</tr>
</tbody>
</table>

When the user clicks the icon, Folio confirms the issue transaction:

*Item [Barcode] was issued successfully. Please return on or before [return date].*

If unsuccessful a Folio message explains why.

**Returns**

Users can return items in these ways:

**User Services: Return item**

When the user selects Return Item from the User Services menu, Folio displays a return screen:

```
Return an item:

Please scan or type the item's barcode: [ ] Return
```

The end user types in the barcode and clicks the Return button. A message confirms:

*Item (barcode) was returned successfully. Please deposit the item in the Book Returns box.*

If unsuccessful a Folio message explains why.

**Account details**

When the user displays their own details in Folio by choosing the **User Services> View/Update account** option, the Loans tab can be configured to show the Return icon:

[https://help.oclc.org/Library_Management/OLIB/Folio/Self_issue%2C_return_and_renewals](https://help.oclc.org/Library_Management/OLIB/Folio/Self_issue%2C_return_and_renewals)
When the user clicks the icon, Folio confirms the return transaction:

*Item (barcode) was returned successfully. Please deposit the item in the Book Returns box.*

If unsuccessful a Folio message explains why.

**Configuration in OLIB Web**

**Add options to User Services menu**

By default these options are not configured. Enable the Issue Item and Return Item options using these settings in `g_uservmenu`:

- `usmenu_options` array

By default these options have `Include?=N`

<table>
<thead>
<tr>
<th>CONFIG SETTING ID</th>
<th>INTERFACE</th>
<th>CONFIG BLOCK</th>
<th>SETTING</th>
<th>VALUE</th>
<th>SEQUENCE 1</th>
<th>SEQUENCE 2</th>
<th>INCLUDE?</th>
</tr>
</thead>
<tbody>
<tr>
<td>604956</td>
<td>1</td>
<td><code>g_uservmenu</code></td>
<td><code>usmenu_option\$issue&quot;</code></td>
<td></td>
<td>1</td>
<td>7</td>
<td>Y</td>
</tr>
<tr>
<td>604957</td>
<td>1</td>
<td><code>g_uservmenu</code></td>
<td><code>usmenu_option\$return&quot;</code></td>
<td></td>
<td>1</td>
<td>8</td>
<td>Y</td>
</tr>
</tbody>
</table>

1. Go to OPAC> Configuration Settings
2. Search for `usmenu_options`.
3. Check the box to select the "issue" / "return" options and from the Actions box click `Include`.

If you want to change the text of the options ("Issue item" / "Return item"), display the details of the "issue" and "return" settings and edit `Value 2`.

Reload Folio to view the options in the User Services menu.

**Enable issue in title Availability tab**

This configures the Issue icon in the Copy Availability tab shown in [Title availability tab](https://help.oclc.org/Library_Management/OLIB/Folio/Self_issue%2C_return_and_renewals) above. The setting is in `g_title_details`:
• show_issue

1. Go to OPAC> Configuration Settings.
2. Search for show_issue.
3. Edit the setting to have Include?=Yes.

**Enable returns in user account Loans tab**

This configures the Return icon in the User Loans tab shown in Account details above. The setting is in g_user_details:

• show_return

1. Go to OPAC> Configuration Settings.
2. Search for show_return.
3. Edit the setting to have Include?=Yes.

**Renewals in Folio**

The users’ ability to renew items on loan is available by default from the Loans tab in the user’s Account Details. In the Folio menu go to User Services> View/Update Account

This displays the user account details Loans tab:

OLIB renewal parameters determine whether the user’s renewal can go ahead.

The Renew column is not displayed if the user has reached their maximum debt for renewals and you have configured OLlib’s circulation message cmc075 to disallow self-renewal in these circumstances. In this case, a message is displayed above the Loans table:

**Note:** you cannot renew anything because the amount of outstanding fines you owe is too high.

https://help.oclc.org/Library_Management/OLIB/Folio/Self_issue%2C_return_and_renewals
Printed: Sat, 24 Sep 2022 09:57:16 GMT
When **Renew** is clicked, if the item can be renewed, the **Renewed until message** (l_renew_ok in g_renew) is displayed in place of the **Renew** icon. If the item cannot be renewed, the **Not renewed because** message (l_renew_fail) is displayed if there is a specific reason for the failure to renew, otherwise **Not renewed** (l_renew_fail_nomsg setting) is displayed.

![Renew All Items]: if the user has several items on loan and wants to renew them all, they can click this icon at the foot of the currently on loan box.

### Disable renewals

The Renew column and the self-renewal service can be removed from display:

1. Go to Configuration Settings.
2. Search for the setting **allow_renewals** in g_user_details.
3. Set **Include=N** or **Value="N"** to remove the renewals function from the loans display.

(Both **Include=Y** and **Value="Y"** need to be set for the Renew column to display and the self-renewal service to work).

Changes take place in Folio immediately.
