Does CQR work with responsive sites?

Last updated: Fri, 23 Jul 2021 18:27:11 GMT

Symptom

- You are unable to get results back from queries built from CQR on your responsive site.

Applies to

- CONTENTdm

Resolution

CQR (Custom Queries and Results) does not work with responsive sites. The CQR tool can be used to construct queries in the old URL format, but because the URLs and forms are built for PHP they won't work on Responsive sites.
