What is the source IP address for TCP/IP export for Connexion browser?

Last updated: Thu, 06 Jan 2022 17:44:26 GMT

Applies to

- Connexion browser

Answer

The IP address **132.174.100.234** needs to be configured by your Network Administrator. If this IP address is not configured for access through an institution's firewall, the TCP/IP export between Connexion browser and your system will fail.

The port range **30000-30499** will be used, and all ports in this range must be open.

Please continue to allow IP range **132.174.0.0/16** as this range is used for the general searching of WorldCat within Connexion browser.
