In order to provide access to resources that use https, your EZproxy server must be configured with an SSL certificate.

Primark uses two numeric host names which must also be included in your EZproxy configuration to proxy databases such as Global Access. To include these hosts, your database stanza in config.txt should look similar to this:

```
Title Global Access (updated 20021106)
URL http://www.primark.com
Domain primark.com
Host 206.181.209.21
Host 206.181.209.22
```
